

Optomap and iWellness OCT Information

Our office includes dilated evaluations as part of a comprehensive examination in order to obtain a proper evaluation of the internal health of your eyes. In lieu of routine dilation we are able to offer the Optomap digital retinal imaging which gives an excellent look at the surface of the retina without having to be dilated. **All diabetic patients will be dilated.**

We are also pleased to offer the iWellness SD-OCT, similar to an MRI, it allows us to evaluate the retina in multiple layers. This preventative technology allows us to monitor our patient's well-being and only refer to a specialist when necessary.

_____ Both Optomap and iWellness \$54

_____ Optomap Only \$39

_____ iWellness Only \$44

Antioxidant Screening

We are committed to checking the status of your eye health in relation to your general well being. Your general health and eye health are connected, proper vitamins and carotenoid antioxidants decrease risk of:

- Macular Degeneration
- Cataracts
- Glaucoma
- Dry Eye
- Diabetes

Our Biophotonic Antioxidant scanner allows us to track, monitor, and improve carotenoid and overall antioxidant levels. The scan is fast, painless, and inexpensive and allows our patients to monitor and track progress.

_____ Antioxidant Screening \$20
